

## Informace o frekvencích používaných mikroporty

Přijímače a vysílače  mají šířku pásma 42 MHz a celkem 1680 možných přenosových frekvencí (kanálů). Používají 20 frekvenčních skupin (bank) s pevně nastavenými frekvencemi. Frekvence v jedné skupině jsou navrženy tak, aby se vzájemně nerušily. To znamená, že pokud používáte několik mikroportů, měli byste u všech používat frekvence ze stejné skupiny. Jelikož řady mikroportů ew G3 mají různý počet frekvencí ve skupině, plyne z tohoto počtu i maximální počet současně použitelných mikroportů:

ew 100 G3 - 12 frekvencí  
ew 300 G3 - 24 frekvencí  
ew 500 G3 - 32 frekvencí

Pokud vám z nějakého důvodu nevyhovují pevné frekvence, můžete si uložit vlastní hodnoty do frekvenčních skupin U (1 skupina u ew 100 G3, 6 skupin u ew 300/500 G3). Tyto volné frekvence ale nemusí být vzájemně odolné proti intermodulačnímu rušení. V případě, že chcete u více mikroportů používat volné frekvence, měli byste je navrhnout pomocí programu SIFM (Sennheiser Intermodulation Frequency Management).

### Přehled frekvenčních rozsahů

A - 516 - 558 MHz

G - 566 - 608 MHz

B - 626 - 668 MHz

C - 734 - 776 MHz

D - 780 - 822 MHz (od 1.1.2013 se nemohou v EU používat)

E - 823 - 865 MHz (od 1.1.2013 se nemohou v EU používat)

## Pevně nastavené frekvence v pásmu A - 516 - 558 MHz
